

A recall arrives. The shelf still needs checking.

Lotlight

Recall response for small healthcare teams

Picture a clinic manager with a notice, a stock list and four storage locations.
Lotlight helps them document which products need attention and what staff did.

A real notice. A fictional clinic.

36

units with exact identifier pairs

14

units need more identifier evidence

THE LAST MILE OF RECALL RESPONSE

A notice is only the beginning.

Find what's on your shelves. See why it matches.
Give every response a clear next step.

HISTORICAL NOTICE SYNTHETIC STOCK

+ New recall review

Inventory lines	Identifier matches	Needs more evidence	Responses completed
8 across 4 locations	2 in the selected notice	2 never shelved cleared	0 with staff-recorded evidence

Built for the in-between

Published doesn't mean resolved.

Connect the notice to the shelf, and the shelf to a documented response.

EVIDENCE BEFORE ACTION

01 Bring the notice
Preserve the original wording and scope.

02 Reconcile the shelf
Exact identifiers first. AI helps find others.

03 Document the response
Assign, verify, and record completion.

Restart demo + Start empty workspace

Decision support. Verify current manufacturer instructions before acting.

Built with care, by Shivam Gupta

Willow demo: 8 inventory lines, 218 units, 4 locations. Two selected catalog–lot pairs only.

AI helps find candidates. People approve.

Semantic search

Local MiniLM suggests candidates when product names differ.
No API key required.

Explicit matching rules

Manufacturer, catalog and the paired lot determine an identifier match.

The screenshot displays the Lotlight interface, which is divided into two main sections: 'Evidence & approach' on the left and 'Inventory review' on the right.

Evidence & approach: This section includes a 'Human judgment' box with the text 'A better paper trail.' and 'Every match shows its evidence. Every action has an owner.' Below this is a user profile for Shivam Gupta, Creator of DSH Hacks V2.

Inventory review: This section shows a list of inventory items with their details and matching status. The items are:

- CLEARLINK solution set:** Main stockroom · 12 units · Baxter. 2R8858 LOT R25A13024. Identifier match. AI similarity 0.61.
- CLEARLINK extension set:** Infusion room · 24 units · Baxter. 2C8632 LOT R25C31031. Identifier match. AI similarity 0.52.
- CLEARLINK extension set:** Procedure room · 8 units · Baxter. 2C8632 LOT Missing. Needs information. AI similarity 0.52.
- IV line extender:** Mobile cart · 6 units · Baxter. No catalog LOT Missing. AI candidate. AI similarity 0.36.
- CLEARLINK solution set:** Infusion room · 10 units · Baxter. 2R8858 LOT R24Z88888. No listed match. AI similarity 0.61.
- CLEARLINK extension set:** ... No listed match.

The interface also includes a 'Run again' button and a search bar labeled 'Search inventory...'.

Similarity cannot authorize action.

A reviewer checks the source and approves the working scope before staff record a response.

The review workflow

01 Bring the evidence

Import CSV and notice text. Transcribe PDF tables into checked labeled lines.

02 Review the matches

Inspect exact pairs and unresolved identifiers. Approve the source scope.

03 Record the response

Name the responsible person. Account for the full quantity with evidence.

04 Keep the record

Save under a signed-in account. Export JSON, CSV or a printable audit.

Immutable source and inventory snapshots preserve the inputs behind each response.

A small-clinic business hypothesis

\$149

per site / month

Proposed price, not validated

5 hours × \$30 = \$150

Illustrative monthly staff time value.
The pilot must measure time saved and willingness to pay.

Buyer: clinic operations manager

ECRI already offers enterprise recall workflows and inventory matching.
Our wedge to test: lightweight setup for clinics working from spreadsheets.

What we tested

33

automated logic checks pass

Browser checks pass for workflow, sign-in, persistence, exports and mobile use.

12 synthetic descriptions

6 relevant examples in a toy set.
Semantic top 6 retrieved 5 of them.
Lexical matching found 4.

One plausible alias still missed.

Hand-authored examples, with a threshold tuned after inspection. No accuracy or clinical validation claim.

The next proof belongs in a clinic.

A supervised recall drill

Recruit 3 pilot clinics. Compare review time and missed identifiers.
Ask whether the evidence record is useful enough to pay for.
